Question 1: Multiple Choice Which of the following pipe materials is most suitable for underground water supply lines? A) PVC B) Copper C) PEX D) Cast iron Answer: B) Copper Explanation: Copper pipes are highly durable, resistant to corrosion, and commonly used for underground water supply lines. PVC is also suitable but is often used in non-underground applications due to UV sensitivity. PEX is flexible and easy to install but less common for direct burial unless specifically rated. Cast iron is primarily used for drainage, not water supply. --- Plumbing Test Questions And Answers 8 Question 2: True or False A vent pipe must terminate at least 10 feet above any property line to prevent sewer gases from entering neighboring properties. Answer: False Explanation: Vent pipes should terminate above the roofline, typically at least 6 inches above the highest fixture, and must conform to local codes. While proper venting helps prevent sewer gases from entering buildings, the specific distance from property lines depends on local regulations, and there is no universal requirement of 10 feet for property line clearance. --- Question 3: Scenario-Based A homeowner reports that their kitchen sink is draining slowly. Upon inspection, you notice a buildup of greasy residue and hair in the trap. What steps should you take to resolve the issue? Answer: 1. Turn off the water supply to prevent flooding. 2.
