this revised and updated new edition of a successful book is a multidisciplinary comprehensive guide to occupational factors of malignant diseases building on the first edition new research discoveries and their consequences in our understanding on carcinogenic mechanisms diagnosis and attribution of occupational cancers are discussed examples of such discoveries are germline and acquired mutations of bap1 in malignant mesothelioma which have led to changes in diagnostic criteria and carcinogen specific genetic and epigenetic alterations in lung cancer there are several new chapters including gastrointestinal cancers epidemiology of lung cancer cancer of thyroid and the role of primary health care in occupational cancer control occupational cancers is aimed at experienced and trainee oncologists pathologists clinicians in occupational health and pulmonologists as well as epidemiologists clinical researchers lawyers and public health officials

this research topic is dedicated to compiling the latest information on the biological factors associated with the tumour microenvironment and anti cancer mechanisms the role of the immune system in cancer eradication has been explored for several decades with varying results regarding its effectiveness some tumours are sensitive to immune response while others may evade immune detection or resistance research into those pathways has already led to a new class of immuno oncology treatments known as checkpoint inhibitors which disrupt immunosuppression and restore t cell activity the controversy was the result of a

poor understanding of the underlying mechanisms that govern responsiveness and unresponsiveness hence significant advances have been made concerning the regulation of the host immune response against cancer and several immuno therapeutics have been recently introduced and used clinically various studies have examined potential underlying mechanisms involved in resistance and identified a variety of gene products that play pivotal roles in maintaining the resistant phenotype of the cancer cells to cell mediated immunotherapy emphasis is on the biochemical molecular and genetic mechanisms by which the tumour spreads and resists the scope of this research topic will be to provide updated information to scientists and clinicians that is valuable in their quest to gather information carry out new investigations and develop novel immuno sensitizing agents that are both more potent and also that might be active whereby the existing ones were not active in addition this research topic aims to to provide basic and clinical evidence based on molecular interactions and clinical studies to address the tumour microenvironment its role in metastasis novel risk factors and risk and benefits of novel cancer immunotherapy to present the results of new immunotherapy trials discussing the state of the art in breast cancer including targeted therapies approved by the fda along with therapies with clinical potential used in basic studies this research topic is a second edition volume ii of our previous highly successful project building on the valuable contributions and insights from the last edition this new collection aims to further explore emerging trends and advancements fostering a deeper understanding of the subject and encouraging continued collaboration in the field article types and fees this research topic accepts the following article types unless otherwise specified in the research topic description case report clinical trial editorial fair² data fair² data direct submission hypothesis and theory methods mini review opinion view all formats articles that are accepted for publication by our external editors following rigorous peer review incur a publishing fee charged to authors institutions or funders

the social determinants of health sdh are defined by the world health organization as the conditions in which people are born grow work live and age and the wider set of forces and systems shaping the conditions of daily life social determinants as well as psychosocial factors are elements that have a significant influence on people s health and well being these factors include psychological social and also cultural aspects which can affect a person s behavior and health

these psychosocial determinants may include stress education poverty social exclusion discrimination and violence such factors can act as protective or on the contrary increase the risk of physical and mental illness and affect the quality of life of individuals

pd 1 axis inhibitors are a group of immune checkpoint inhibitors icis that block the pd 1 pd l1 interaction to reinstate immune recognition the tumor microenvironment tme is complex and ever changing and can affect response to anticancer therapies including pd 1 axis inhibitors despite the established efficacy of pd 1 axis inhibitors not all patients respond to treatment and some will develop resistance therefore it is essential to understand the factors that contribute to primary or secondary treatment resistance to develop new approaches and ultimately improve patient outcomes this research topic aims to explore different aspects of the tme that contribute to response resistance to pd 1 axis inhibitors including 1 understanding resistance mechanisms gaining a better understanding of the mechanisms behind immunotherapy resistance is crucial in developing effective strategies to overcome it this involves studying the cellular interactions and molecular alterations within the tme that contribute to immunosuppression 2 combinatorial strategies rational and synergistic combination therapies can be designed to lower the risk of resistance and prolong the benefits of immunotherapy this may involve combining icis or adding different treatment modalities such as chemotherapy or local therapies 3 enhancing immune response strategies that aim to enhance the immune response of t and nk cells have shown promise in overcoming immunotherapy resistance this can be achieved through various approaches such as targeting immunosuppressive factors in the tme 4 targeting specific mechanisms identifying specific mechanisms of resistance such as inactivation of antigen presentation can help develop tailored therapies to overcome resistance we are interested in original research systematic review methods review mini review clinical trial case report brief research report study protocol and technology and code articles focusing on but not limited to the following areas various cellular and molecular alterations within the tme that contribute to immunotherapy resistance particularly the resistance mechanisms that are currently being targeted by novel therapeutic strategies this can include intrinsic mechanisms e g cell signaling immune recognition gene expression extrinsic mechanisms e g t cell activation neo angiogenesis and specific pathways or

molecules that play a role in immunotherapy resistance preclinical and clinical treatment approaches that have shown promise in lowering the risk of resistance and prolonging the benefits of immunotherapy combination therapies that aim to overcome immunotherapy resistance the emerging role of antibody drug conjugates adcs in shaping the immune microenvironment and increasing treatment efficacy of icis manuscripts consisting solely of bioinformatics or computational analysis of public genomic or transcriptomic databases which are not accompanied by robust and relevant validation clinical cohort or biological validation in vitro or in vivo are out of scope for this topic
