this book summarizes and highlights progress in our understanding of dynamical systems during six years of the german

priority research program ergodic theory analysis and efficient simulation of dynamical systems the program was funded by the deutsche forschungsgemeinschaft dfg and aimed at combining focussing and enhancing research efforts of active groups in the field by cooperation on a federal level the surveys in the book are addressed to experts and non experts in the mathematical community alike in addition they intend to convey the significance of the results for applications far into the neighboring disciplines of science three fundamental topics in dynamical systems are at the core of our research effort behavior for large time dimension measure and chaos each of these topics is of course a highly complex problem area in itself and does not fit naturally into the deplorably traditional confines of any of the disciplines of ergodic theory analysis or numerical analysis alone the necessity of mathematical cooperation between these three disciplines is quite obvious when facing the formidable task of establishing a bidirectional transfer which bridges the gap between deep detailed theoretical insight and relevant specific applications both analysis and numerical analysis play a key role when it comes to building that bridge some steps of our joint bridging efforts are collected in this volume neither our approach nor the presentations in this volume are monolithic

nothing stays the same for ever the environmental degradation and corrosion of materials is inevitable and affects most aspects of life in industrial settings this inescapable fact has very significant financial safety and environmental implications the handbook of environmental degradation of materials explains how to measure analyse and control environmental degradation for a wide range of industrial materials including metals polymers ceramics concrete wood and textiles exposed to environmental factors such as weather seawater and fire divided into sections which deal with analysis types of degradation protection and surface engineering respectively the reader is introduced to the wide variety of environmental effects and what can be done to control them the expert contributors to this book provide a wealth of insider knowledge and engineering knowhow complementing their explanations and advice with case studies from areas such as pipelines tankers packaging and chemical processing equipment ensures that the reader understands the practical measures that can be put in place to save money lives and the environment the handbook s broad scope introduces the reader to the effects of environmental degradation on a wide range of materials including metals plastics concrete wood and textiles for each type of material the book describes the kind of degradation that effects it and how best to protect it case studies show how organizations from small consulting firms to corporate giants design and manufacture products that are more resistant to environmental effects

the first three chapters contain the elements of the theory of dynamical systems and the numerical solution of initial value

problems in the remaining chapters numerical methods are formulated as dynamical systems and the convergence and stability properties of the methods are examined

ultrasound in medicine is a broad ranging study of medical ultrasound including ultrasound propagation interaction with tissue and innovations in the application of ultrasound in medicine the book focuses specifically on the science and technology the underlying physics and engineering it examines the most closely related aspects of these basic sciences in clinical application and reviews the success of technological innovations in improving medical diagnosis and treatment the book bridges the gap between tutorial texts widely available for ultrasound and medical training and theoretical works on acoustics

this and its companion volumes 2 and 3 document the proceedings of the 4th international symposium on surfactants in solution held in lund sweden june 27 july 2 1982 this biennial event was christened as the 4th symposium as this was a continuation of earlier conferences dealing with surfactants held in 1976 albany under the title micellization solubilization and microemulsions in 1978 knoxville under the title solution chemistry of surfactants and in 1980 potsdam where it was dubbed as solution behavior of surfactants theoretical and applied aspects the proceedings of all these symposia have been properly chronicled the lund symposium was titled as surfactants in solution as both the aggregation and adsorption aspects of surfactants were covered and furthermore we were interested in a general title which could be used for future conferences in this series as these biennial events have become a well recognized forum for bringing together researchers with varied interests in the arena of surfactants so it is amply vindicated to continue these and the next meeting is planned for july 9 13 1984 in bordeaux france under the cochairmanship of k l mittal and p bothorel the venue for 1986 is still open although india inter alia is a good possibility apropos we would be delighted to entertain suggestions regarding where and when these biennial symposia should be held in the future and you may direct your response to kk
